

FAQ

Sales Department — Frequently Asked Questions

Version: 2.3 | Last Updated: Sep-2026 | Audience: Sales Team & Distributors

Distributor Onboarding & Credit

Q: What is the process to onboard a new distributor?

A: The Area Sales Manager submits a New Distributor Proposal with territory rationale and financial background, which is reviewed by the Regional Sales Manager, verified by Finance for creditworthiness, and finalised with a signed Distributor Agreement before the first order is placed.

Q: How can a distributor request a credit limit enhancement?

A: Enhancement requests are submitted via the DMS with supporting sales growth data and are reviewed jointly by the Regional Sales Manager and Finance Business Partner, typically within 10 working days.

Orders, Schemes & Claims

Q: What is the daily order booking cut-off time?

A: Standard order booking cut-off is 4:00 PM local time for next-day dispatch in metro and Tier-1 markets; Tier-2/3 markets follow a route-day schedule communicated by the regional Supply Chain team.

Q: How does a distributor claim a promotional scheme payout?

A: Scheme claims are submitted through the DMS referencing the approved scheme code, along with proof of secondary sales/visibility compliance, and are processed within 15 working days of validation.

Q: How is damaged or expired stock claimed by a distributor?

A: Claims must be logged in the DMS within 7 days of identification with photographic evidence; approved claims are credited to the distributor's account within 10 working days.

Incentives & Reporting

Q: When are Sales team incentive payouts processed?

A: Monthly incentive payouts are processed with the following month's payroll cycle, subject to secondary sales data reconciliation and target achievement sign-off by the Regional Sales Manager.

Q: What is 'secondary sales' and why does it matter for reporting?

A: Secondary sales refers to sales from distributor to retailer (as opposed to primary sales, i.e. company to distributor). Secondary sales data is critical for accurate demand sensing and forms the basis for several incentive and scheme calculations.
