

FAQ

Supply Chain — Frequently Asked Questions

Version: 2.1 | Last Updated: Aug-2026 | Audience: Internal Teams & Distributors

Order Fulfilment & OTIF

Q: What is SCPL's target OTIF (On-Time-In-Full) performance?

A: The company-wide OTIF target is 95%, measured as orders delivered on the confirmed date with full quantity and no quality rejections, tracked weekly at the regional distribution centre level.

Q: What is the standard lead time for a distributor order?

A: Metro and Tier-1 markets: 24–48 hours from order confirmation. Tier-2/Tier-3 and remote markets: 72–96 hours, depending on route frequency and C&F agent location.

Q: What is the minimum order quantity (MOQ) for a distributor order?

A: MOQ varies by category and is defined in the Distributor Agreement, typically set at a full-case or half-truckload threshold to optimise logistics cost; exceptions may apply for new distributor onboarding.

Returns & Claims

Q: How does a distributor raise a claim for damaged goods received?

A: Claims are raised through the DMS portal with photographic evidence within 7 days of delivery; the regional supply chain team verifies and processes approved claims within 10 working days.

Q: What happens to stock nearing its expiry date at a distributor's warehouse?

A: Distributors are alerted via the DMS when stock crosses 70–75% of shelf life (category-dependent) and are expected to prioritise its sale; unsold near-expiry stock may be eligible for return per the Distributor Agreement's return clause.

Planning & Seasonality

Q: How does SCPL plan for festive season demand spikes?

A: Demand planning begins 90 days ahead of major festive periods (Diwali, regional harvest festivals), using historical sell-through data and Sales team inputs, with buffer stock built at regional DCs 3–4 weeks in advance.

Q: Who do I contact for a stock-out escalation on a key SKU?

A: Stock-out escalations should be raised with the Regional Supply Chain Manager, who coordinates with the plant planning team and Sales for prioritised allocation.
