

REPORT

Supply Chain Performance Report — Q1 FY2026-27

Period: Apr–Jun 2026 | Prepared By: Supply Chain Analytics | Classification: Internal — Management Use

1. Executive Summary

Company-wide OTIF performance for Q1 FY2026-27 stood at 94.6%, marginally below the 95% target, primarily due to monsoon-related transit disruptions in the Eastern region. Inventory turns improved to 9.8x on the back of tighter FEFO discipline and demand-planning accuracy gains.

2. OTIF Performance by Region

Region	OTIF %	Primary Cause of Misses
North	96.1%	Vehicle availability during peak days
South	95.4%	Minor documentation delays
West	96.8%	Within target
East	89.2%	Monsoon-related road disruptions

3. Key Supply Chain Metrics

Metric	Q1 FY26-27	Q1 FY25-26
Inventory Turnover Ratio	9.8x	9.1x
Average Order Lead Time (Metro/Tier-1)	36 hours	40 hours
Warehouse Space Utilisation	83%	79%
Transportation Cost (% of Net Sales)	4.9%	5.0%
Transit Damage Rate	0.18%	0.22%

4. Key Issues & Corrective Actions

- Eastern region OTIF shortfall: alternate route contingency plans and pre-positioned buffer stock being implemented ahead of the next monsoon cycle.
- Two regional DCs approaching 90%+ space utilisation: capacity expansion evaluation initiated for Kolkata and Guwahati DCs.
- Near-expiry write-offs reduced 15% YoY following stricter FEFO enforcement and improved demand-sensing at the distributor level.

5. Outlook

Supply Chain will prioritise monsoon contingency planning for the East region, continued rollout of AI-assisted demand forecasting to further reduce near-expiry inventory, and warehouse capacity augmentation in high-growth Eastern and Southern markets.
